

How to tell what year my Sears mower is?

To locate the serial number, it is usually located under or near the seat in a protected area.

The first two numbers are the mower's month of manufacture, the second two numbers indicate the day of manufacture, and the third two numbers signify the year of manufacture.

For example, if the first six numbers are 031398, your mower was manufactured on March 13, 1998.
