

The standard regulator we install on our turf sprayers is adjustable from 5 psi to 300 psi. Since most turf applications are performed at approximately 30 psi, the standard regulator maintains this desired pressure very accurately.

The D30 diaphragm pump is capable of achieving 550 psi. The HIGH PRESSURE REGULATOR is accurate between 50 psi and 550 psi. The regulator recommended when ROOTFEEDING is approximately 200 psi and TREE SPRAYING is between 300-500 psi.

The HIGH PRESSURE REGULATOR also features a pressure unloader which allows for easy engine starting.
