

## **Iron Ready Sprayers**

Iron mixtures have proven to be an alternative to pesticides for selective weed control in turf grass. In some areas, particularly in Canada where pesticide bans are in place, iron solutions are becoming popular.

Iron based products are very corrosive to traditional spraying equipment. The Iron Ready Sprayers produced by Rittenhouse are manufactured using components to best stand up to the corrosive and small particle abrasions caused by these iron mixtures.

Please note that these sprayers are not iron-proof but they do offer substantially more resistance to the iron-based spray products than our standard high quality Rittenhouse equipment.

The Iron Ready Sprayers feature:

- Top feed poly suction assemblies and tank suction tubes
- Pumps and pressure regulators that are straight flow through to reduce damage caused by the abrasive particles found in iron
- Return flow agitation

Please note that Iron Ready Sprayers are NOT a replacement for regularly (daily at an absolute minimum) rinsing, flushing. All sprayers should be stored without product in the tank, even overnight.

Some components including, but not limited to, hose reel swivels, regulators, pumps, spray guns, and connections will have a reduced life span due to corrosion.
