Backpack Granular Applicator

1. 2 flexible hoses included. Choose the appropriate length based on the operator's height.
2. Insert the rigid tube of the applicator handle into the flexible hose and tighten with a hose clamp.
3. Place the other end of the flexible tube over the outlet at the bottom of the backpack hopper and tighten with a hose clamp.
4. Adjust the backpack straps according to the operator's size. Ensure that the fit is comfortable and the hopper remains level.
5. Calibrate to dispense product in accordance with product instructions. Use the two black knobs to regulate the amount of product being dispensed: tighten to increase amount of product, loosen to decrease. Use the increments found on the dispenser tip (when it is pushed out) as a helpful gauge. Adjustable from 2 - 25 grams.
6. To reduce back strain put the applicator on a raised position like a table or back of a pick-up truck.
7. After use, it is recommended to hang the applicator by the straps ensuring that the flexible hose is not kinked or crushed.

Note:

- Not for use with powders
- Do not use large sized granules
- Do not use wet or damp product
- Wash and dry well between each use
- Store carefully when traveling to keep lid from blowing off
